**Summary :** Free the fallacy of net neutrality pdf download - there is little dispute that the internet should continue as an open platform notes the u s federal communications commission yet in a curious twist of logic the agency has moved to discontinue the legal regime successfully yielding that magnificent platform in late 2010 it imposed network neutrality regulations on broadband access providers both wired and wireless networks cannot a block subscribers use of certain devices applications or services b unreasonably discriminate offering superior access for some services over others the commission argues that such rules are necessary as the internet was designed to bar gatekeepers the view is faulty both in it engineering claims and its economic conclusions networks routinely manage traffic and often bundle content with data transport precisely because such coordination produces superior service when walled gardens emerge including aol in 1995 japan s docomo imode in 1999 or apple s iphone in 2007 they often disrupt old business models thrilling consumers providing golden opportunities for application developers advancing internet growth in some cases these gardens have dropped their walls others remain vibrant the open internet allows consumers investors and innovators to choose discovering efficiencies the fcc has mistaken that spontaneous market process for a planned market structure imposing new rules to protect what evolved without them
