Summary : Free iutam symposium on geometry and statistics of turbulence pdf download - this volume contains the papers presented at the iutam symposium on geometry and statistics of turbulence held in november 1999 at the shonan international village center hayama kanagawa-ken japan the symposium was proposed in 1996 aiming at organizing concentrated discussions on current understanding of fluid turbulence with emphasis on the statistics and the underlying geometric structures the decision of the general assembly of international union of theoretical and applied mechanics iutam to accept the proposal was greeted with enthusiasm turbulence is often characterized as having the properties of mixing intermittency non-gaussian statistics and so on interest is growing recently in how these properties are related to formation and evolution of structures note that the intermittency is meant for passive scalars as well as for turbulence velocity or rate of dissipation there were eighty-eight participants in the symposium they came from thirteen countries and fifty-seven papers were presented the presentations comprised a wide variety of fundamental subjects of mathematics statistical analyses physical models as well as engineering applications among the subjects discussed are a degree of self-similarity in cascade b fine-scale structures and degree of markovian property in turbulence c dynamics of vorticity and rates of strain d statistics associated with vortex structures e topology structures and statistics of passive scalar advection f partial differential equations governing pdfs of velocity in cements g thermal turbulences h channel and pipe flow turbulences and others
