**Summary :** Free monitoring the comprehensive nuclear-test-ban treaty source processes and explosion yield estimation pdf download - pure appl geophys by 161 nations entry of the treaty into force however is still uncertain since it requires ratification by all 44 nations that have some nuclear capability and as of 15 june 2001 only 31 of those nations have done so although entry of the ctbt into force is still uncertain seismologists and scientists in related fields such as radionuclides have proceeded with new research on issues relevant to monitoring compliance with it results of much of that research may be used by the international monitoring system headquartered in vienna and by several national centers and individual institutions to monitor compliance with the ctbt new issues associated with ctbt monitoring in the 21st century have presented scientists with many new challenges they must be able to effectively monitor compliance by several countries that have not previously been nuclear powers effective monitoring requires that we be able to detect and locate much smaller nuclear events than ever before and to distinguish them from small earthquakes and other types of explosions we must have those capabilities in regions that are seismically active and geologically complex and where seismic waves might not propagate efficiently
